DISPLAYS
Technology and Applications

Index to Volume 6

Title

A large screen matrix display using an array of ac plasma display panels *Chen Zhegen*, 78
A review of recent hidden surface removal techniques *Willis, P J*, 11
Colour design in aviation cartography *Taylor, R M*, 187
Discrimination of sharpness in a televised moving image *Glenn, W E and Glenn, K G*, 202
Floating drive schemes for dual-frequency addressing of complex liquid crystal displays *Pieper, B*, 153
High contrast sets of colours for colour CRTs under various conditions of illumination *De Corte, W*, 95
Liquid crystal dot-matrix display using a multiplexed guest–host effect *Clerc, J F*, 148
Liquid crystalline tetrazine compounds as dyes for guest–host displays with positive contrast *Pelzl, G, Zaschke, H and Demus, D*, 141
Luminescent materials for displays: comments on evolution and present status *Kazan, B*, 85
Multimode fixed legend liquid crystal and electroluminescent display *McDonnell, D G, Krüger, H H and Theis, D*, 67
Performance of a-WO_3/$LiClO_4$-PC electrochromic displays *Ando, E, Kawakami, K, Matsuhiro, K and Masuda, Y*, 3
Plasma display panel MgO thin film properties and their modification by low energy ion bombardment *Seehase, H*, 21
Recommendations for applying colour coding to air traffic control displays *Narborough-Hall, C S*, 131
Smectic dynamic scattering in laser-addressed liquid crystal projection displays *Walker, C J and Crossland, W A*, 207
Spatial contrast detection for colour patterns under selective chromatic adaptation *Bourdy, C, Vienot, F, Monot, A and Chiron, A*, 43
The colours are not on the display: a survey of non-veridical perceptions that may turn up on a colour display *Walraven, J*, 35
The effect of picture element failure on the legibility of a matrix display image *Laycock, J*, 70
The effect of VDU colour on visual fatigue in the fovea and periphery of the visual field *Osaka, N*, 138

Notes, research notes and technical notes

Automatic electrooptic bench for the characterization of liquid crystal materials and devices *Hughes, J R*, 212
Discomfort and visual displays *Wilkins, A J*, 101
Dual-frequency addressing of liquid crystal matrix displays with three drive frequencies *Pieper, B*, 157
Training good eyes to see better *Roscoe, S N*, 218

Author

Ando, E, Kawakami, K, Matsuhiro, K and Masuda, Y Performance of a-WO_3/$LiClO_4$-PC electrochromic displays, 3

Bourdy, C, Vienot, F, Monot, A and Chiron, A Spatial contrast detection for colour patterns under selective chromatic adaptation, 43

Chen Zhegen A large screen matrix display using an array of ac plasma display panels, 78

Clerc, J F Liquid crystal dot-matrix display using a multiplexed guest–host effect, 148

De Corte, W High contrast sets of colours for colour CRTs under various conditions of illumination, 95

Glenn, W E and Glenn, K G Discrimination of sharpness in a televised moving image, 202

Hughes, J R Automatic electrooptic bench for the characterization of liquid crystal materials and devices, 212

Kazan, B Luminescent materials for displays: comments on evolution and present status, 85

Laycock, J The effect of picture element failure on the legibility of a matrix display image, 70

McDonnell, D G, Krüger, H H and Theis, D Multimode fixed legend liquid crystal and electroluminescent display, 67

Narborough-Hall, C S Recommendations for applying colour coding to air traffic control displays, 131

Osaka, N The effect of VDU colour on visual fatigue in the fovea and periphery of the visual field, 138

Pelzl, G, Zaschke, H and Demus, D Liquid crystalline tetrazine compounds as dyes for guest–host displays with positive contrast, 141

Pieper, B Dual-frequency addressing of liquid crystal matrix displays with three drive frequencies, 157

Pieper, B Floating drive schemes for dual-frequency addressing of complex liquid crystal displays, 153

Roscoe, S N Training good eyes to see better, 218

Seehase, H Plasma display panel MgO thin film properties and their modification by low energy ion bombardment, 21

Taylor, R M Colour design in aviation cartography, 187

Walraven, J The colours are not on the display: a survey of non-veridical perceptions that may turn up on a colour display, 35

Walker, C J and Crossland, W A Smectic dynamic scattering in laser-addressed liquid crystal projection displays, 207

Wilkins, A J Discomfort and visual displays, 101

Willis, P J A review of recent hidden surface removal techniques, 11

Subject

Book reviews

Advances in display technology IV, 159

Designing VDU workplaces: workstation, environment, organization and system introduction, 159

Vision and the visual display unit workstation, 238

Conferences

Colour in information technology and visual displays, 162

Electronic displays 84, 123

Eurodesign 84, 121

Eurodisplay 84, 60

Liquid crystal displays, 221

MMI issues in displays, 120

SID international symposium, 161

SID UK and Ireland Branch inaugural meeting, 164

Literature

Emulating a light pen on a raster device, 118

Overview of the current standards and guidelines for VDUs, 118

Planar pulse discharge panel for monochrome TV, 118

News

Air traffic simulators ordered, 235

Airports to receive runway information displays, 114

Airspeed is included on primary flight display, 56

All-weather display designed for graphics and animation, 54

Alphanumeric LED display, 168

Asynchronous terminal, 56

Australia mapped for the first time, 169

Automated assembly area for VDU manufacturer, 55

Automotive systems brochure, 112

Bargraph displays use plasma technology, 179
Bifocal technique puts more information on display, 105
Blue LED is based on silicon carbide, 112
Blue/green display module has 40 characters, 167
Board repair system, 171
Both monochrome and colour graphics from one card, 54
Brighter future for fibre optics compared with CRTs, 55
Business aircraft benefit from digital avionics system, 109

CAD access on the cheap, 232
Cheap large-area flat screen displays, 226
Colour graphics controller for 68000 family, 115
Colour ink-jet printer has 512 characters, 173
Compact LCD has chip-on-board driver and memory, 175
Computer graphics is big growth area, 236
Controller to enable LCD panels to replace VDUs, 56
CRT contract, 109
Custom control panels, 234
Custom design of LCDs, 106

Development of large high-definition CRT, 117
Digital avionics system to be installed in Challenger, 58
Digital moving map display for navigation, 53
Digital radar displays four levels of precipitation, 112
Display demonstrator superimposes radar images onto digital map, 114
Display page has 20 digits, 56
Display pattern can be specified on LCDs, 115
Display suppliers forced to face the future, 104
Displays for B-1B bomber, 59
Displays for B-1B bomber will be tested, 59
Distribution of light control film, 180
Dot matrix displays go underground, 52

Engine indication and new advisory system, 226

Filters for contrast enhancement, 176
Financial exchange goes for VF display, 223
Flat panel display for mobile equipment, 177
Flat panel displays market forecast, 172
Flight simulator is to be jointly developed, 53
Flight system for TSRV, 115
Full graphic gas plasma display, 165

Glowing future for electronic displays predicted, 57
Graphics subsystem changes standard PC into CAD workstation, 57
Growth in home electronics, 174

Harrier head-up display, 234
Harrier map system, 234
Health hazards reduced with radiation filter, 229
High contrast LCD, 176
High performance CRT, 235
High performance LEDs, 172
High resolution monitors, 52
Human aspects of computers, 167

Imaging sensor gives night vision, 232
Intelligent controller for process display, 166
Intelligent LEDs for flashing characters, 106
International conference will work with display units, 52

Large LCD panel for OEM systems, 113
Large LED display for local audiences, 110
Larger LCD for text editor has been developed, 170
Largest LED producer, 59
Laser printing set for a boom, 227
Lasers locate aircraft, 230
LCD drivers for dichroic and twisted nematic displays, 116
LCD drivers for twisted nematic displays, 59
LCD heaters, 106
LCD is one-third of A4 page, 111
LCD modules form display panels, 174
LCD modules use CRT software, 224
LCD touch screen overlays, 229
LED printer delivered, 230
LED sockets with built-in resistors, 171
LEDs that work in sunlight, 228
Liquid crystal modules for long distance clarity, 111
Liquid crystal shutter adds colour to monochrome CRT, 169
Liquid crystals give three-dimensional image, 180
Lower case characters on LCD signboard, 116

Medical imaging market looks bleak, 224
Memory function in bargraph meters, 180
Micro lamp, 228
Modelling system, 236
Mosaic mimic display system for active and passive components, 108
Moving map display developed for Harrier, 168

Night flying displays tested, 178

Operator comfort transformed, 179
Optical fibre for use with LEDs, 110
Order for flight simulators, 170

Panels that glow in the dark, 225
Phillips heads east, 177
Plasma display panel for daylight use, 113
Plasma panels for large display systems, 107
Power supply for Penetron CRTs, 107
Prize for significant development of flat screen displays, 104
Public access videotex to beat home use systems, 117
Public information display makes UK debut, 232

Reduced reflections, 113
Report examines relationship between humans and display systems, 181

Satellite TV receiver improves on picture quality, 222
Slim EL panels, 109
Smart displays, 110
Space-saving terminal, 233
Specifications for indicator lamps, 108
Stereoplotter combines with computer graphics, 230
Study looks at the prospects for active matrix displays, 226
Subminiature camera, 178

Tankers will make safer passage, 236
Training package for VDU health and safety issues, 105
Triplex LCD driver, 165

UK and Ireland SID branch formed, 117
UK and US cooperation on helmet-mounted display systems, 58
Underwater LCDs, 237
Updated colour graphics displays, 171

VDF keeps a low profile, 116
Video pattern generator, 223
Videographics chip, 175

Waveform display responds quickly, 225
Workstation is based on 32-bit microprocessor, 58
Worldwide computer graphics, 177
